Agricultural Machinery Grease Lubrication Systems

- The best time to grease your machines is during operation - small quantities of grease are measured and distributed to each point many times per day ensuring hard working components are always perfectly lubricated and damaging contamination is kept out.
- Manual lubrication is eliminated - no more time wasted on servicing grease points
- Grease points can't be missed - difficult or hard to reach points can't be missed out and are kept perfectly greased regardless of servicing schedules
- Vital seeding, spraying and harvesting can carry on around the clock without interruption for critical maintenance
- Peace of mind - Your initial investment in the ALS will protect your capital investment, providing trouble free operation and creating the perfect working environment for all components for the life of your vehicle

Construction Machine Grease Lubrication Systems

- The Alemlube Lube System pump is made of the latest engineering polymer materials making it lighter, stronger & more durable for the harshest operating conditions & exposure to the elements.
- Alemlube engineers the right volume of lubricant to each grease point and the precision machined progressive dividers ensure that each point receives the correct amount of grease.
- Every component in the Alemlube Lube System is designed for an industry best pressure of 280Bar (4,200psi).
- Protects your investment and lets you know if any grease point won't accept grease.
